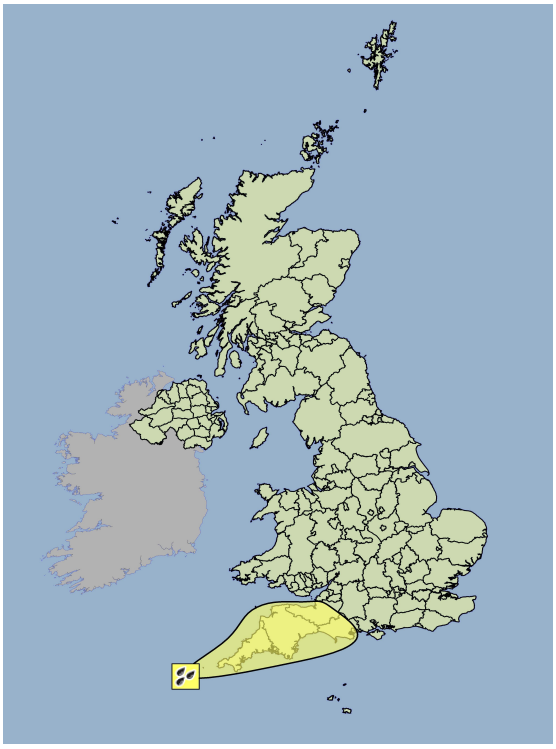
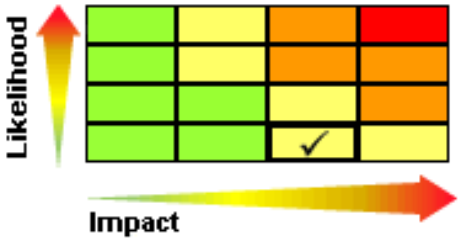
National Severe Weather Warning Service





Chief Forecasters Assessment
Another spell of wet and rather windy weather is expected across southwest England during Monday. The associated Atlantic low pressure system is significantly less energetic than recently but may still lead to some exacerbation of existing problems given the saturated state of the ground. Rainfall totals of 10 to 15 mm seem likely quite widely and perhaps 30 to 40 mm locally, mainly over high ground.

This Alert will be reviewed on Sunday morning.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:15 on Mon, 17th Feb 2014** until **23:45 on Mon, 17th Feb 2014**

Another spell of rain is expected across southwest England during Monday. This is not expected to be as prolonged or heavy as in recent days but still has the potential to exacerbate existing flooding problems given the saturated state of the ground.

The public should be aware of this possible further flood risk and disruption to transport.
